Duplikium Copy Trading — Follower Setup
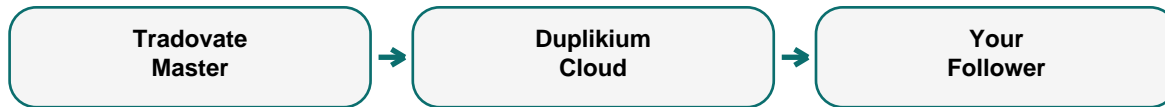

Follow Ekantik trades (Tradovate master) • Version December 15, 2025

Tradovate Master	→	Duplikium Cloud	→	Your Follower

Duplikium is a cloud-based trade copier: you connect your account and set copy rules; then trades placed on the Master can be replicated to your account.

Before you start

- Have a live or demo **futures-enabled** brokerage account that supports Duplikium and can trade **ES** and/or **MES** futures.
- Make sure your account has futures permissions, market data, and sufficient margin.
- Get your unique **Provider Link** from Ekantik (this link connects you to the Master strategy).
- Recommended: test in a demo/sim account first.

Quick setup (5 steps)

1 **1) Register**: Open your Ekantik **Provider Link**, create your Duplikium account, confirm email, then click *Proceed to Dashboard*.

2 **2) Add your account**: In the Duplikium cockpit, click **Add a Slave** and enter your trading account details exactly as requested (login, password, broker/server, etc.). Use your **trader password** when prompted.

3 **3) Verify connection**: Confirm your Slave shows as *connected/online*.

4 **4) Configure Copy Settings**: Open **Copy Settings** and set your size rules (risk factor/multiplier) and protection rules (max position size, allowed symbols, etc.).

5 **5) Start following**: Once enabled, trades placed on the Master will be copied to your account. Monitor the first few copied trades closely.

Sizing examples (choose what fits you)

- **Same size**: 1 → 1 contract (multiplier 1.0).
- **Bigger size**: 1 → 2 contracts (multiplier 2.0).
- **Smaller size**: Futures require whole contracts. If you need smaller increments, use **MES** instead of **ES** when possible.
- **Risk cap**: Always set a max position size and only allow the symbols you intend to trade (ES/MES).

Troubleshooting & Safety Checklist

Use this page if trades are not copying or if you want extra guardrails.

Common issues

- **Nothing copies**: confirm your Slave is connected/online; trades typically copy only after setup is complete.
- **Wrong size**: re-check Copy Settings (risk factor/multiplier) and rounding behavior for futures.
- **Symbol mismatch**: confirm you can trade the exact ES/MES contract on your broker account.
- **Risk limits blocking**: max position size / symbol limits can block new copies once reached.
- **Stops/targets not copying**: some features (SL/TP or pending orders) may require a paid plan depending on configuration.

Recommended protection settings

- Set **Max position size** (and any max daily volume/trades).
- Limit to **allowed symbols** (ES/MES only).
- Start small for the first week and increase only after you confirm behavior.
- Keep a margin buffer for intraday volatility.

Support

Email **info@ekantikcapital.com** for help verifying your Provider Link and recommended copy settings.

Important risk disclosure

Futures trading involves substantial risk and is not suitable for all investors. Past performance is not necessarily indicative of future results. You are responsible for your account permissions, margin, and risk controls.
